

WISKIND

COMPANY INTRODUCTION

Wiskind Group was established in 1978 and is headquartered in Shandong. Wiskind Group is a comprehensive modern private enterprise integrating R&D, production, engineering and technical services, warehousing, processing and capital operation. It has more than 30 branches and offices with more than 2,400 employees. At present, the Wiskind Group's business covers five core industrial sectors: cleanroom enclosure system, R&D, production and engineering services of fabricated building steel products, high-end coated steel plate distribution services, high-precision cold-roll steel plate manufacturing and integrated housing (modular box-type housing).

MANUFACTURING CAPACITY

THE COLOR SERIES PRODUCTION LINE

The whole production line was imported from PUMA, Italy, which employs state-of-the-art core production process introduced from the Europe, as well as the six-component onsite foaming technology, to guarantee the stability of product performance, while the application of the ultra-long dual tracks ensures the flatness of the panel products. Upon digestion and absorption of advanced technologies from abroad, Wiskind has developed the all new Color Series production line, which represents nearly 300 improvements, with two invention patents obtained in the fields of bonding technology and rockwool delivery & lubricant systems.

THE COLORCURTAIN[®] PRODUCTION LINE

The Colorcurtain[®] production line independently designed and developed by Wiskind is the only automatic production line of metal curtain wall panels in China that integrates both insulation and decoration features. The Colorcurtain[®] products are characterized by great thermal insulation & flame resistant performances, aesthetic appearance, safe structure and convenient construction, so they become high-grade building materials widely applied in office buildings, shopping malls and public buildings for exterior insulation and decoration purposes.

CLEANROOM PANEL PRODUCTION LINE

Wiskind cleanroom panel production line has 4 standard panel production lines and 2 non-standard panel flexible production lines. It adopts the high-end imported equipment from Robor, Italy. The double track is equipped with a solid steel structure frame, which is heat treated to ensure the dimensional stability during production. The super long track ensures the flatness of the product. The system has a high degree of automation, fast processing efficiency and stable product quality. The maximum annual production capacity reached 5 million square meters per year. It can produce cleanroom panel with various of core materials. The birth of the automatic production line of cleanroom panel has subverted the industry's cognition of traditional cleanroom panel production technology.

CLEANROOM DOOR AND CLEANROOM WINDOW PRODUCTION LINE

The whole production line is composed of two parts: composite and sealant installation. Automatic production subverting the traditional production process of cleanroom window, improving the utilization rate of materials, reducing the labor input. In this way, it can greatly improves the precision, airtightness and aesthetics of the cleanroom window. With faster processing speed and higher product quality, Wiskind leads the domestic cleanroom window production industry.

INNOVATION CENTER

The building of Wiskind Innovation Center consists of a large-scale comprehensive R&D test base and a 4-story scientific research building, with a total area of 5000m². It is a comprehensive building integrating R&D, experiments and office functions. It is equipped with more than 40 sets of professional equipment. It can realize 32 experiments such as architectural physics, organic chemistry, structural mechanics, cleanroom space, etc. It is one of the most authoritative and complete laboratories in the industry. Wiskind establishes strategic partnership with Baosteel, Yehui, BlueScope, Maanshan Iron and Steel, BASF and many other high-end brand suppliers, and set up joint innovation laboratory with them. Wiskind provides complete testing and testing conditions for the development of high-quality building products. Wiskind has obtained professional certification from China Construction Metal Structure Association.

PROFESSIONAL SERVICES

Relying on the analysis of massive engineering typesetting data in big data centers, Wiskind has a cleanroom space intelligent design system. This system can intelligently composes and plans various functions and areas. At the same time, the color matching system software of cleanroom is introduced. According to the user's working nature and environmental requirements, different colors of cleanroom panel, cleanroom door, cleanroom window, floor, aluminum profile, glue, etc. are matched. The features of this system are: 3D effect, intuitive feeling, high accuracy, convenient dynamic adjustment and fast response. It provides good support for cleanroom enclosure system.
